Professional Summary

Results-driven Data Engineer 2 years 9 months of Experience with 1 year Internship designing, developing, and maintaining data pipelines. Proficient in automating ETL workflows, working with structured/unstructured data, and building scalable API's using Python, SQL, MongoDB, and FastAPI. Strong background in web scraping, OCR integration, and data automation for analytics and decision-making.

Skills

Languages: Python, HTML/CSS, Script programming
Databases: MongoDB, MySQL, SQL Server, No SQL, Elasticsearch
Frameworks: Fast API, Rest API, Django, Flask
ML & Data: Scikit-learn, NumPy, Pandas, Matplotlib, SciPy, Prompt Engineering, LangChain, OpenAI API
Libraries: BeautifulSoup, Selenium, Easy OCR, pytesseract, wisperAI, elastic search, RegEX (regex)
Cloud & Tools: AWS S3, Google Cloud Platform, Docker, Git, Linux

Experience

Software Developer/Data Engineer Nov 2023 – Present
Legit Quest *NEW DELHI, INDIA*

- Developed FastAPI-based microservices for serving and processing ingested data.
- Optimized MongoDB queries and ETL performance to meet daily SLAs.
- Conducted data validation, debugging, and version control using Git and Linux.
- Designed custom ETL pipelines using Python, Selenium, and Beautiful Soup for retail datasets
- Built OCR-based extraction workflows with Easy OCR and Py- Tesseract for scanned documents.
- Computerized dataset updates and integrated time-series data for analytics dashboards and Implemented monitoring scripts for error handling and anomaly detection.

Legit Quest Projects

Patrol — FIR Data Ingestion & Search

- Python, Selenium, BeautifulSoup, MongoDB, Elasticsearch, FastAPI, AWS S3
- Built automated collection workflows for police/FIR data from portals and APIs, storing extracted records and PDF assets.
- Integrated Elasticsearch indexing for case search and filtering; scheduled recurring updates and recovery jobs.

Legal Research Data Platform

- Python, MongoDB, Elasticsearch, APIs, Cloud Storage
- Automated ingestion from API and web sources and supported scheduled refreshes for searchable legal-research datasets.

Projects

Electronic Scraper
Python, MongoDB, Django, AWS Feb 2022 – Aug 2022

- Developed systematized time-series data scraper with dynamic schema detection.
- Built Frontend & Backend interface using Django to display.
- Applied automated data ingestion from web sources, storing structured/unstructured data in MongoDB.
- Increased data accuracy by 80 percent through logging and error-handling layers.- Supported ingestion from multiple sources with modular architecture.

Weather Forecasting System
Python, MongoDB, Scikit-learn, NumPy, Pandas, Django Jan 2026 – Present

- Developed a machine learning-based weather forecasting system to predict next-day weather conditions.
- Integrated OpenWeatherMap API to collect real-time weather data for current-day parameters.
- Performed data preprocessing and feature engineering using NumPy and Pandas.
- Trained prediction models using Scikit-learn for temperature and humidity forecasting.
- Built frontend interface using Django to display live weather and 1-day forecast results.
- Implemented automated prediction pipeline using Python.

AI Chatbot Project
Python, FastAPI, OpenAI API, LangChain, MongoDB, Elasticsearch, Web Scraping Mar 2026 – Present

- Developed an AI-powered chatbot using Python and FastAPI for intelligent query handling and conversational responses.
- Integrated LLM for natural language understanding and context-aware responses.
- Built document retrieval and search pipelines using Elasticsearch and MongoDB.
- Implemented web scraping and OCR-based data extraction to feed chatbot knowledge base.
- Added conversation history management and prompt optimization for improved accuracy.

Education

IGNOU NEW DELHI, INDIA
Bachelor of Computer Application *JUN. 2021 – JUN 2024*

Certifications

Legit Quest : Data Ingestion and Automation/Software Development Internship –

Languages

Hindi: Native
English: Intermediate (Working Proficiency)
